Russia

Main problem

Older people often need to take a large number of pills, but due to age, there are difficulties with the schedule of taking medications. Unfortunately, there is no specific device in Russia to solve this problem.

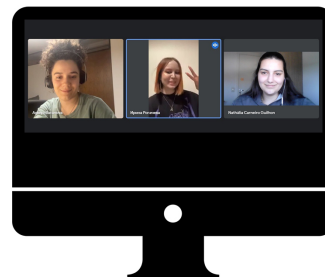

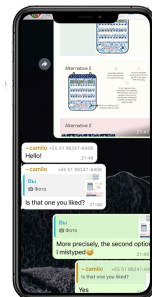

The Purpose

In the final version of the project, we wanted to see a device that would make it easier to take pills and allow older people to follow the correct schedule.

Our Request

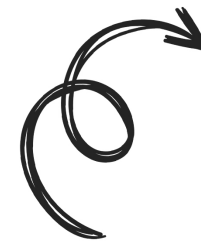

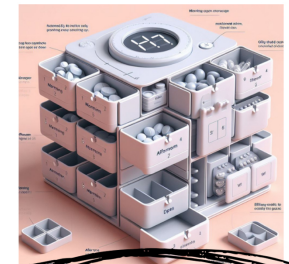

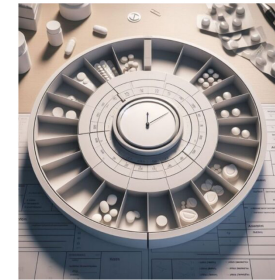

- ✓ Easy to use
- ✓ Russian folk painting (Gzhel, Khokhloma)
- ✓ Availability

Communication

Initai ideas

Team 22 sent us 10 different ideas with a detailed description of the devices that solve our problem

We chose this one
(calendar with timer
and pill compartments)

Russia

Final design

Alternative 2

A monthly calendar, with a compartment for medicine per day.

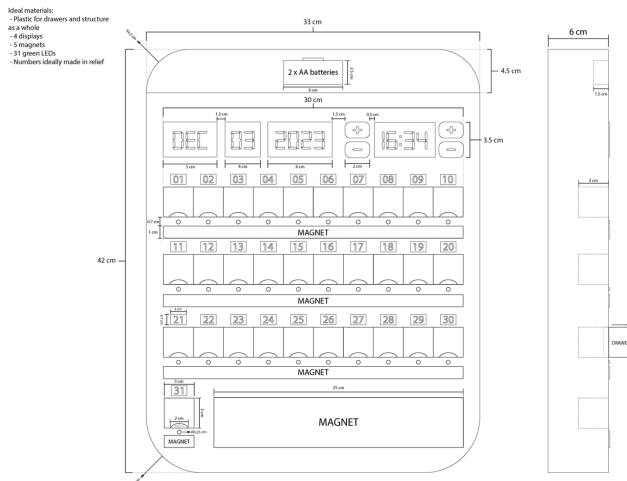

It has an attached clock to set a timer to go off at the same time every day.

It has magnets to be attached to the calendar. With different colors and symbols, they serve to identify each medication and the corresponding days for each.

Button to refill box with medicines after 1 month

We really liked the final idea from the Brazilian team! All our requirements were taken into account, and an individual design was developed according to our request. A calendar with a timer and pill compartments is an ideal solution for elderly people taking various medications.
