SOBA FINAL DESIGN & ATTACHMENTS

Mushroom-shaped hood: this piece is connected to 2, and forms an air corridor with the vents (3), the opening of which can be adjusted with 4. This system ensures that the fire is kept alive without poking it with your hands, and without uncovering the 5. Furthermore, the size of 1, together with its filter inspired by a diatom, guarantee the draft of all the smoke that could escape, and keep the environment free from micro dust.

2 Hood pipe: brings the smoke from the burial chamber 6 to the mushroom-shaped hood, and consequently to the flue 9 that expels the smoke outside. Mushroom-shaped hood: this piece is connected to 2, and forms an air corridor with the vents (3), the opening of which can be adjusted with 4. 5 Inductive heat plate: Dissipates heat by the physical law of induction. by this law, the central point is the hottest, and the further you move from this point, the plate is less hot.

6: retractable door.

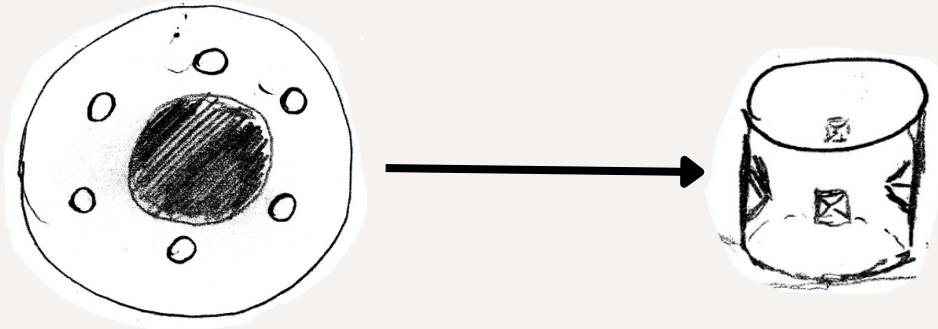

7: compartment for inserting wood, so that the wood is already at hand.

8 ash drawer: is provided with an internal tilting system that brings and cools the ash to its door that can be opened upwards and equipped with a funnel that can precisely pour the ash into a container, which can be a classic Italian brazier used to warm the feet (8A).

8A: foot warming brazier.

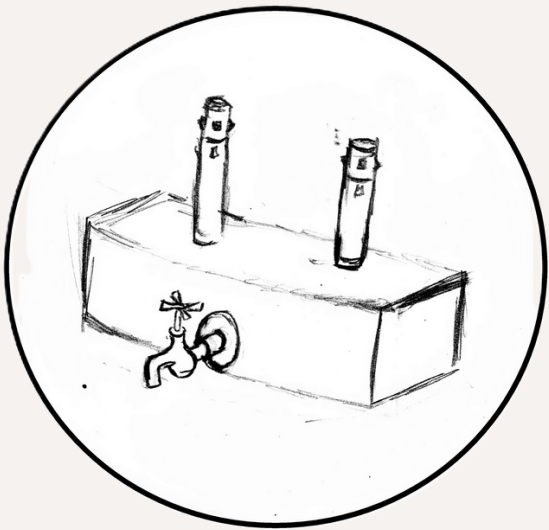

5A

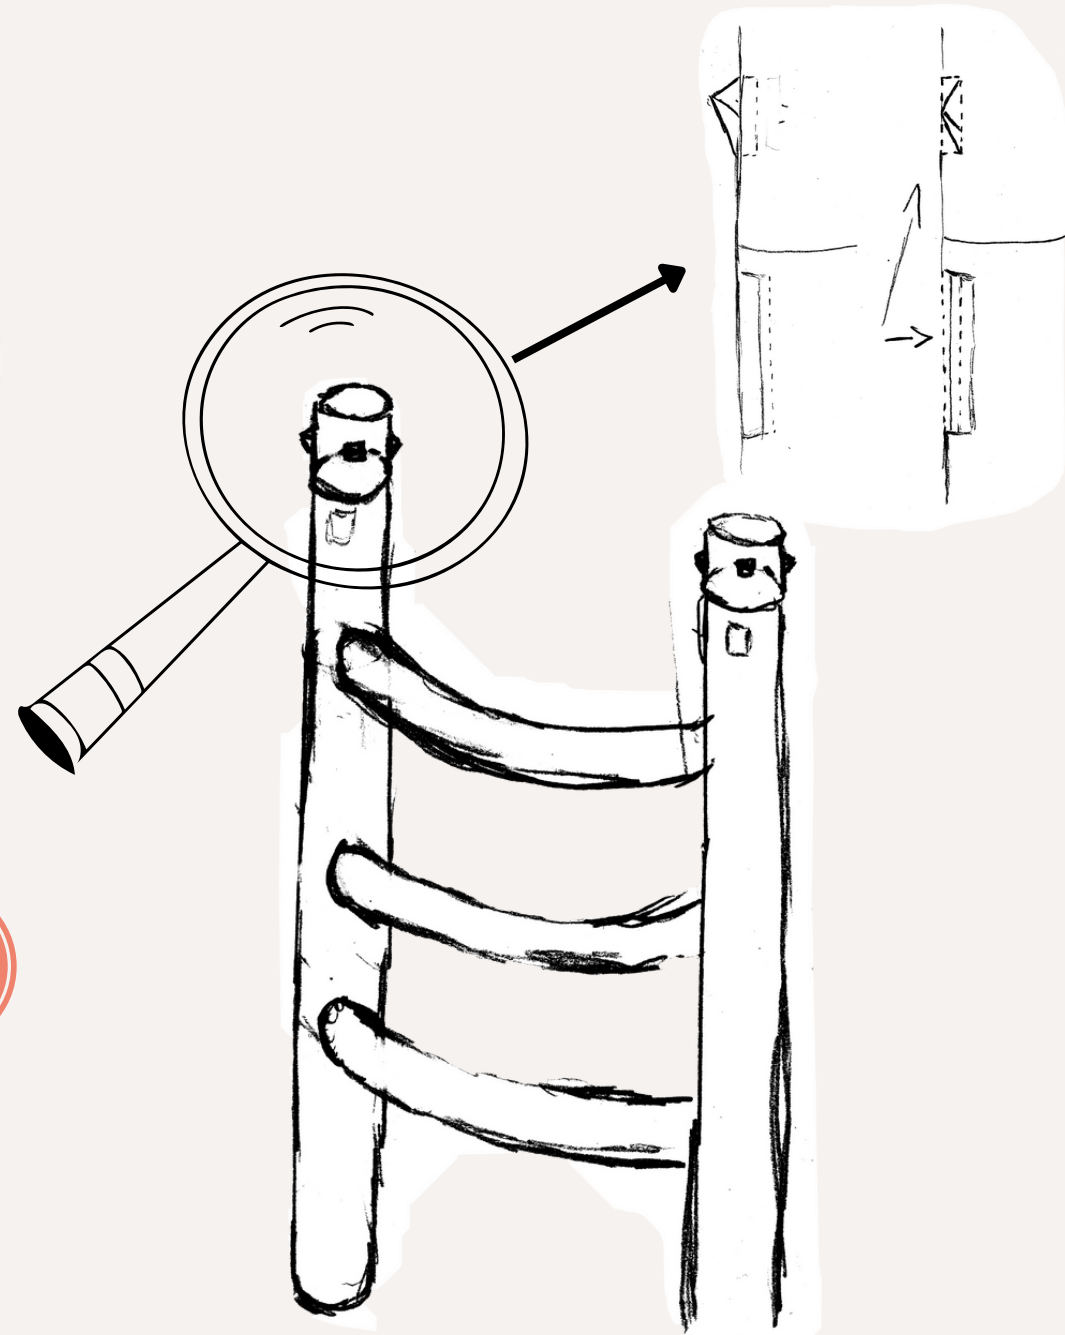

5A: the accommodations to insert (5B;5C), on any point of 5.

5B

5B: FireDryRack® -> with this attachment you can dry damp cloths.

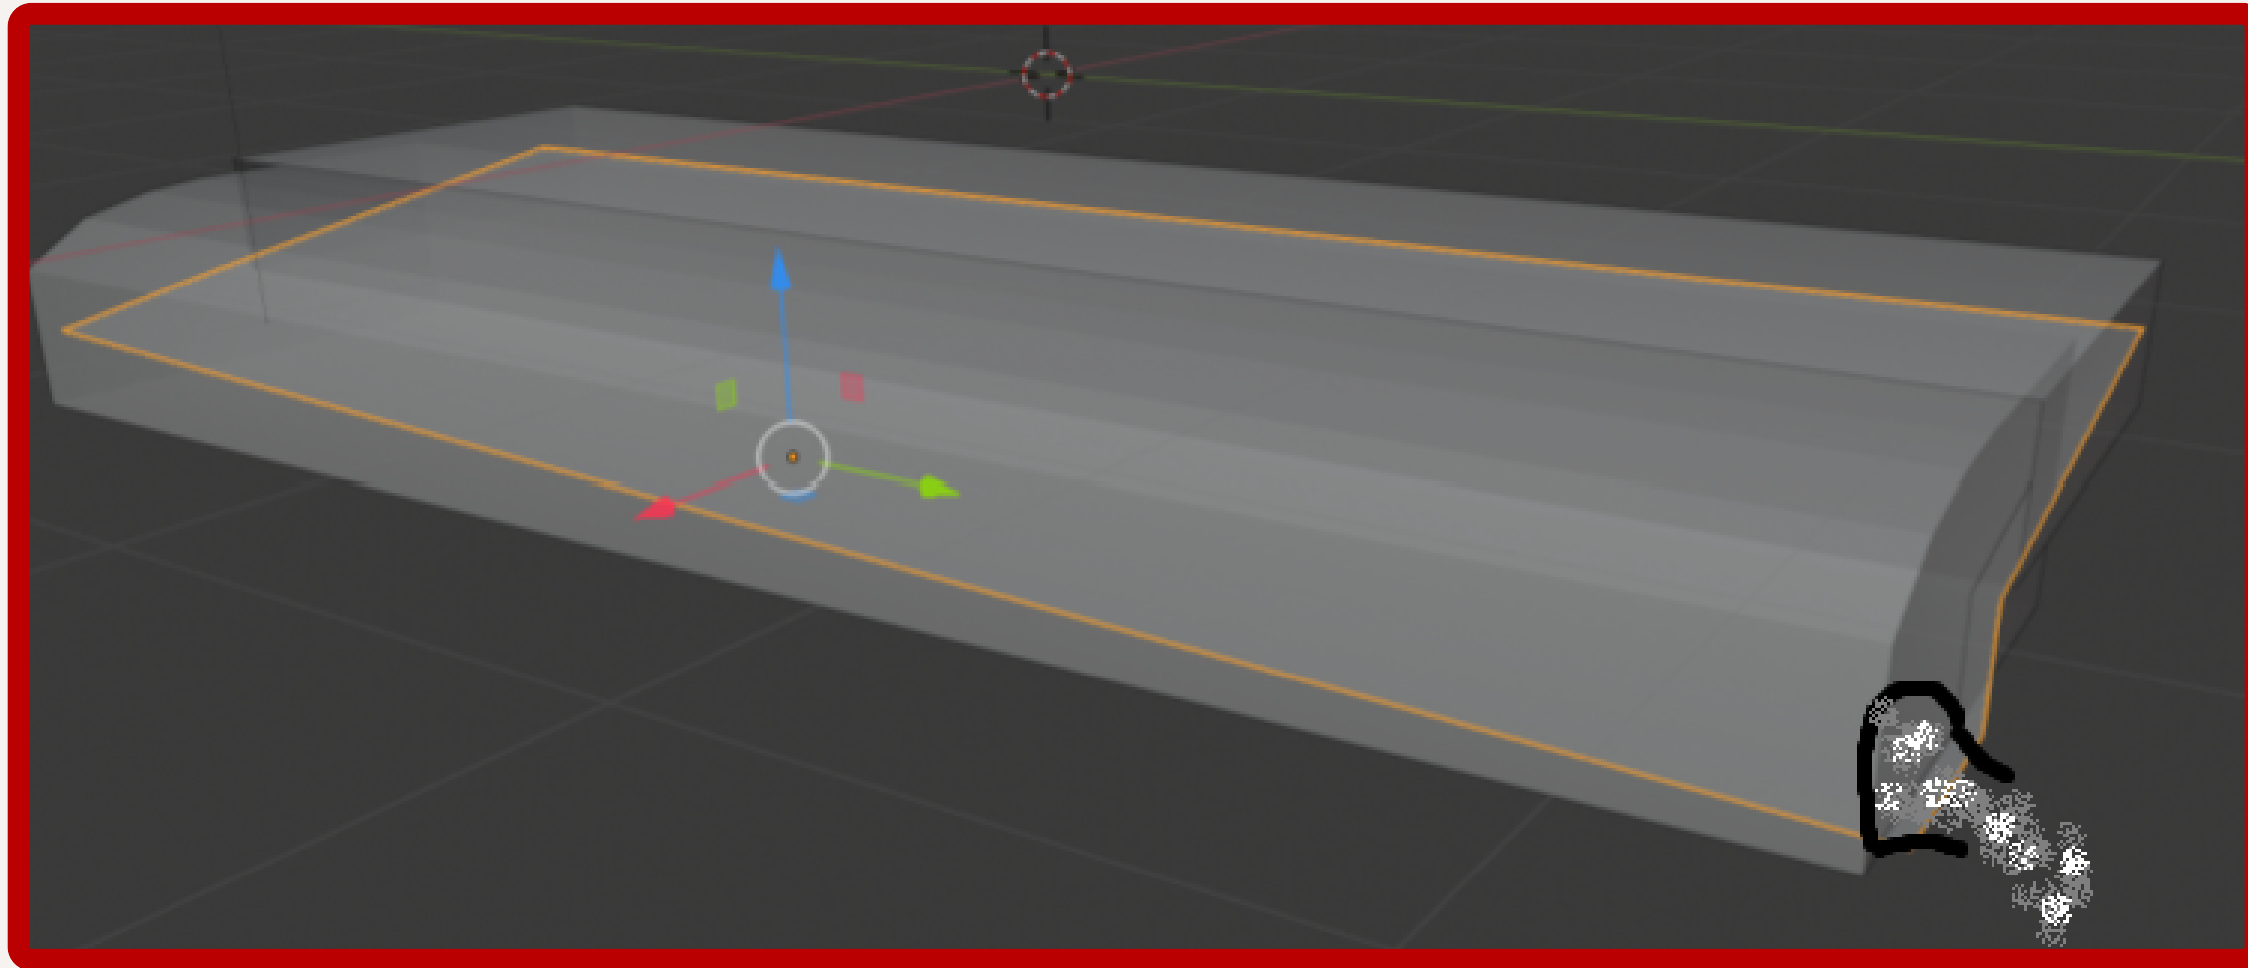

5C:HeatFlowDrawer® --> from this drawer you can from this drawer you can draw always hot water for your tea.

5C

In-depth analysis of the ash drawer structure

The interior of the ash collection drawer has a slight slope that allows the ashes to flow towards the openable hatch, making cleaning easier.
